

MUNICIPAL SOLUTIONS · V2

Platform Manual.

A modular city platform — events, rooms, partnerships, permits, branding, and a no-code home page editor. Build it brick by brick.

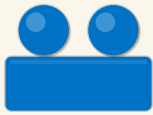

Welcome.

This platform is a single installation that runs many city programs. Every feature is a module you can toggle, every visual is a token you can theme, and the public landing page is editable without touching code.

-  **Community side**
Browse events, buy tickets, reserve rooms, claim busking slots, submit special-event permits, and apply as a vendor or sponsor.
-  **Staff side**
A focused command center: approvals, attendees, sessions, social posts, and per-event dashboards scoped by department.
-  **Admin side**
Manage staff, roles, modules, departments, branding, tenants, the home page, permits, the guidebook, and social integrations.

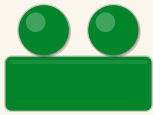

One account, every program.

A single sign-up unlocks every public-facing program. Roles layer on top: any account can be promoted to staff or admin from the admin panel, and granular permissions decide which staff pages and event-dashboard tabs each user sees.

-  **Sign up**
Email + password, optional phone. Profiles can carry an avatar with a custom focal point.
-  **Forgot password**
Self-serve reset via email link from /forgot-password.
-  **Promote to staff**
Admins invite or promote at /staff/admin. Bulk invites are supported for onboarding.
-  **Granular permissions**
Per-permission grid plus per-event overrides — staff see only what they're cleared for.

Modules.

Every major feature is a module that can be turned on or off platform-wide. Disabling a module hides it from public nav, the Hub, and the staff sidebar without losing data — flip it back any time.

-  **Events & Box Office**
Public directory, ticketing, attendees, check-in.
-  **Venues, Stages & Rooms**
Editor, public pages, and the room-reservation booking flow.
-  **Vendors & Sponsors**
Applications, contracts, sponsorship tiers, and payments.
-  **StreetBeats & Community Orgs**
Musician roster with gig claiming; HOA/nonprofit submissions.
-  **Permits, Classes, Social**
Five-step permit wizard, class catalog, multi-channel social publishing.

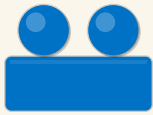

Branding engine.

Branding is no longer two color pickers. The engine at `/staff/admin/branding` controls the full design-token set with a live preview, accessibility scoring, a logo/favicon pipeline, curated font pairs, presets, and full version history.

-  **Full token system**
Primary, secondary, accent, surface, foreground, border, radius, and typography flow into CSS variables on every page.
-  **Live preview & a11y checks**
Every change renders instantly; every color pair is scored against WCAG and flagged before publish.
-  **Logo & favicon pipeline**
Upload one master logo; the favicon pipeline auto-generates 32, 180, and 512 px variants in one click.
-  **Curated font picker**
Pick from a curated set of heading/body pairs with previews — no typing font names.
-  **Presets, drafts, versions**
Save reusable presets, work in drafts, publish atomically, and roll back from version history.

05 · NEW

Tenants (multi-site).

One installation, many branded sites. Tenants at `/staff/admin/tenants` carry their own slug, host, logos, and branding-token overrides. Requests resolve by host, then by `/t/<slug>`, falling back to the global default.

-  **Per-tenant branding**
Each tenant overrides any subset of tokens; everything else inherits from the global theme.
-  **Custom hosts**
Point `events.cityname.gov` (or any host) at a tenant — branding switches automatically.
-  **Pairs with Home Editor**
Each tenant can publish its own home page, replacing the global one only for visitors on that host.

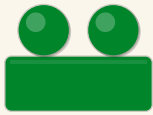

06 · NEW

No-code home page.

The landing page is fully editable from `/staff/admin/home`. A side-by-side editor shows the live preview on the right while you edit hero copy, sections, and footer on the left. Draft → Publish with a version history keeps changes safe.

-  **Hero**
Badge, title, subtitle, signed-in copy, and a list of secondary CTAs (each can be module-gated).
-  **Sections (drag to reorder)**
Portal cards, explainer cards, rich text, image banner with built-in uploader, and CTA band.
-  **Footer**
Tagline, body copy, and the copyright line.
-  **Editing scope**
Switch between Global default and any tenant — tenant rows seed from global on first edit.
-  **Drafts & versions**
Save drafts while you iterate. Publishing snapshots the previous live version into history.

Departments.

Departments slice content and staff workflows. Public users browse by department; staff operate in an active department context that scopes every list and dashboard.

-  **Public hub**
Each department gets a hub at `/departments/:id` with its own logo and theme.
-  **Active department**
Staff pick an active department once; sidebars and approvals filter accordingly.
-  **Cross-department**
Cross-department visibility is opt-in per role — admins control what each role can see.

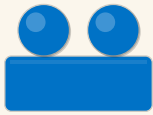

Special event permits.

A five-step wizard collects event details, route, attendance, documents, and fees. Admins control the entire fee schedule and review queue from `/staff/admin/permits`.

-  **Fee schedule**
Three categories: event types, route/trail fees, base fees. Each row has label, cost, sort, and active toggle.
-  **Review queue**
Every non-draft application surfaces here with applicant, fee, status, and uploaded docs.
-  **Status flow**
Pending → Approved/Rejected → Paid. Approval unlocks the applicant's payment panel.

Staff command center.

Staff land in a focused portal: today's events, approvals to action, and one-click access to attendees, sessions, rooms, vendors, and per-event dashboards.

-  **Event dashboard**
Per-event tabs for setup, marketing, attendees, sessions, and finance — gated by permissions.
-  **Attendees & check-in**
Search by QR or name; per-seat attendee records; waitlist promotion.
-  **Social Command**
Compose once, publish to Meta and LinkedIn; track campaigns per event.

Quick index.

-  **/**
Public landing page (editable in admin).
-  **/events · /rooms · /streetbeats**
Public directories for each module.
-  **/community · /vendor · /sponsors**
Application portals for orgs, vendors, and sponsors.
-  **/hub**
Signed-in personal hub — tickets, reservations, gigs, permits.
-  **/staff**
Staff command center, scoped to your active department.
-  **/staff/admin**
Admin home — staff, permissions, modules, departments, permits.
-  **/staff/admin/branding**
Full design-token editor with live preview and versions.
-  **/staff/admin/tenants**
Multi-site tenants with per-tenant branding & host.
-  **/staff/admin/home**
No-code editor for the public landing page.
